

# A Releasing Panel For The Most Demanding Applications

Fire can disrupt lives, communities, even the economy.

An accurate fire detection and suppression system saves lives, preserves property, and prevents drastic repercussions, especially in locations requiring the highest level of protection.

The new System Sensor PDRP-2001 deluge preaction releasing panel can monitor high hazard applications where deluge systems are required. Refineries. Distilleries. Munitions plants.

It can also handle water sensitive environments that call for preaction systems. Freezer warehouses. Computer rooms. Artifact storage.

The PDRP-2001 can monitor both types of applications and offers the most features you can find in a sprinkler system panel.

- Meets sprinkler standards NFPA13, 15, and 16
- Allows connection to 220/240 VAC
- Provides dual hazard operation
- Allows cross-zone (double-interlock) capability
